Neither land nor sea

Discover the tidal creeks and mudflats of the Thames Estuary in Essex

Thirty miles from central London, the River Thames widens into a great estuary on its way to the North Sea. Here mud, marsh and water blend into one.

Container ships navigate the deep channel as they come and go from the docks at Tilbury. On either side, the flat horizon is punctuated by the chimneys of oil refineries and industrial sites. This can seem like a barren and bleak landscape - it can appear grey and lifeless even on a sunny day.

But it is actually a dramatic and constantly changing environment. This walk between Benfleet and Leigh-on-Sea in Essex explores the tidal creeks, salt marshes and mudflats on the edge of the estuary.

Discover how dynamic they are and meet a range of wildlife that are specially-adapted to existing here.

Also find out how people have learned to live in this marginal environment between the land and sea – battling the tides, earning a living and defending their shores.
